

ABSTRACT

Improvements Relating to Digital Image Viewing

A system (10) for displaying a user's personal digitised photographic image data (24) in a comparable manner to a photo album is described. The system (10) comprises a combination of: a gaming console (14) for playing a video game; a domestic television (12) for displaying the video game to the user when connected with the console (14); and a CD (18) including the user's digitised photographic image data (24) and a viewing application program (26). The viewing application program (26) is arranged to configure the gaming console (14) to display the digitised photographic image data (24) on the television (12) when the CD (18) has been read by the gaming console (14). The system (10) can be configured to permit simultaneous viewing of the user's image data (24) at remote locations connected by the Internet (126).
